Effective decision making under uncertainty is outlined and high reliability practices for decision making under uncertainty are tabulated. Additionally, it is suggested that we may have learned the wrong lessons from some of our most complex and most important projects delivered under high uncertainty and in the process hard coded a project management dogma that does not serve us under ...

The most common factor that people associate with decision making under uncertainty is risk, and how tolerant an individual is towards risky scenarios. In a risk-based situation, we have a sense of the likelihood of the different outcomes that our decisions could deliver.

## DECISION-MAKING UNDER UNCERTAINTY in Quantitative ...

Here are 16 lessons I learned on improving decision making under uncertainty. 1. The relationship between decision quality and outcome is loose. The outcome of every decision you make provides feedback on your decision making process. However, when you are making decisions under uncertainty – such as playing poker or starting a business – you inherently have limited information to work with, and there are a number of potential outcomes, each with different probabilities.

We live in an uncertain and complex world, yet we continually have to make decisions in the present with uncertain future outcomes. Indeed, we should be on the look-out for "black swans" - low-probability high-impact events. To study, or not to study? To invest, or not to invest?
